

**CARING FOR GOD'S ACRE - TREE SURVEY**

<b>CHURCH NAME</b>	<b>VILLAGE</b>	<b>PARISH</b>	<b>GRID REFERENCE</b>
St John the Baptist	Letton	Letton	SO 335 465

<b>CHURCH CONTACT</b>	<b>SURVEYOR</b>	<b>DATE OF SURVEY</b>
Mr. and Mrs. Maddox	Phi Evans	August 2002

**SUMMARY OF SURVEY**

- Eleven trees were recorded, which included both native and non native species.
- The largest and oldest by far in the survey in an English Yew. There are no very young trees in the churchyard.
- The site has a high amenity and wildlife value.

**SUMMARY OF RECOMMENDATIONS**

- Some small 'attention to detail' actions would benefit individual trees immediately, such as shifting the compost bins and checking ivy.
- Establish a biennial check on all trees to check their health and safety.
- Proactive approaches recommend the removal of Cypresses and holly, clearing around the yew tree, and planning further planting.
